If you want even more information, you can certainly [Contact Us](#). We encourage it, and will answer any questions you need answering.

About US/Our story

The Founders of Trident NDT Services believed that there was a better way to deliver solutions to businesses' NDT needs and that they could provide it. Through experience, knowledge, and collaboration Trident NDT Services was founded and its Fundamental Mission was born:

“To provide great service at a great price”

Our core values hold that relationships between the employee, the employer, and the customer matter. We recognize our responsibility for safety and quality as Inspectors and as Professionals.

Why we do what we do?

We want to change the way people think about Non Destructive Testing. The cost of training equipment, and certifications as well as process control, equipment recalibration, and regulatory authority requirements make NDT operations sophisticated, and intimidating to many. Hence the reason why NDT work is typically contracted out depending on the customers' scope of operations. However very few ask why is NDT so important? If we were to ask the difference in cost of a failed component during use vs the cost of an NDT inspection, the answer would certainly be that the cost of that failed component would be substantially higher.

NDT is a preventive maintenance function, to lessen the likelihood of a part from failing. Imagine if there were an option to opt out of NDT inspections to "save costs". The costs eventually would migrate into other areas under failures, fines, and warranties. Therefore, NDT is actually a cost savings function. The role played by NDT is invaluable.

Although other quality departments exist for in process or final inspections, none compare to the depth and scope of Non Destructive Testing to examine conditions invisible to the human eye, such that specialized training and equipment is needed. It is our goal here at Trident NDT to provide not just great service, but great understanding in what we do and why we care so much.

– Trident NDT Team
